Pitt Ohio Express is an OPEN SCAN® Client

Denver, CO – February 17, 2009 – PITT OHIO EXPRESS, headquartered in Pittsburgh, Pennsylvania is a user of Open Scan Technologies, Inc.'s Corporate Accounts Receivable Processing Software. PITT OHIO is a leading less-than-truckload carrier that delivers more than 10,000 shipments daily with a 97 percent on-time delivery. The company operates a fleet of about 630 tractors and 1,500 trailers from a network of 21 terminals, primarily in the Midwestern and mid-Atlantic US. In addition to LTL freight hauling, the company provides truckload transportation and logistics services.

As with many other industries, the trucking industry evaluates technology investments based on two criteria: cost savings and efficiency improvement. OPEN SCAN's solution is unique in that it significantly reduces operational costs and improves the overall efficiency in the A/R department, satisfying both criteria. In any wholesale business-to-business payments arena the processing of payment documents tends to be very time and labor intensive. In the past, this left companies only two options: Hiring staff or paying a bank to process the documents and checks. OPEN SCAN brings a new solution to A/R processing, allowing for greater control, higher hit rate accuracy, less cost, faster cash application, and more efficient and timely collections activity.

OPEN SCAN's solution provides three key functions that are critical to delivering full wholesale remittance automation: the ability to capture and integrate images from any scanned source including the bank or a remote deposit location; simplified and fully automated data capture from unstructured payment forms; and automated intelligent A/R matching and cash application.

###

About OPEN SCAN

Open Scan Technologies Inc. offers automated accounts receivable (A/R) process solutions that help clients apply payments faster and with more accuracy. The company's solution delivers the convergence of electronic check deposit, remittance processing, forms processing and cash application. Corporations, financial institutions and government agencies realize the highest levels of automation, data accuracy and operational savings for their receivables processing environments.
